Universal Tendon Spacer

Reconstruction of Flexor or Extensor tendons of the fingers, thumb and wrist

Characteristics:

- The Universal Tendon Spacer design makes sure that most of the space allowed by the digital canal will be utilized, thus the greatest possible pseudosheath will be obtained.
- The Universal Tendon Spacer can also be used as a physical support to reconstruct the digital canal.
- The Universal Tendon Spacer is made out of High Performance silicone elastomer. It contains a small amount of Bariumsulfate for X-ray viewing.
- The Universal Tendon smooth surface will induce the appearance of a pseudosheath, and in a second step surgery (2 to 6 months later) an active permanent tendon autograft is implanted.

Dimensions (4 tendon spacers in one)

Length: 49,5 cm
Smaller diameter (B) equals always half of larger diameter (A)
